## ANTIMICROBIAL RESISTANCE (AMR) COMMUNITY OF PRACTICE (CoP)

### Optimising the use of antimicrobial medicines based on antimicrobial resistance surveillance data in Tanzania

**Prof. Jeremiah Seni**

Catholic University of Health and Allied Sciences & Bugando Medical Center, Mwanza, Tanzania

National Chairperson – AMSTWG & Member of MCC, Tanzania

**Reuben Abednego**

National Public Health Laboratory, Dar Es Salaam, Tanzania

GLASS Focal Person, Tanzania

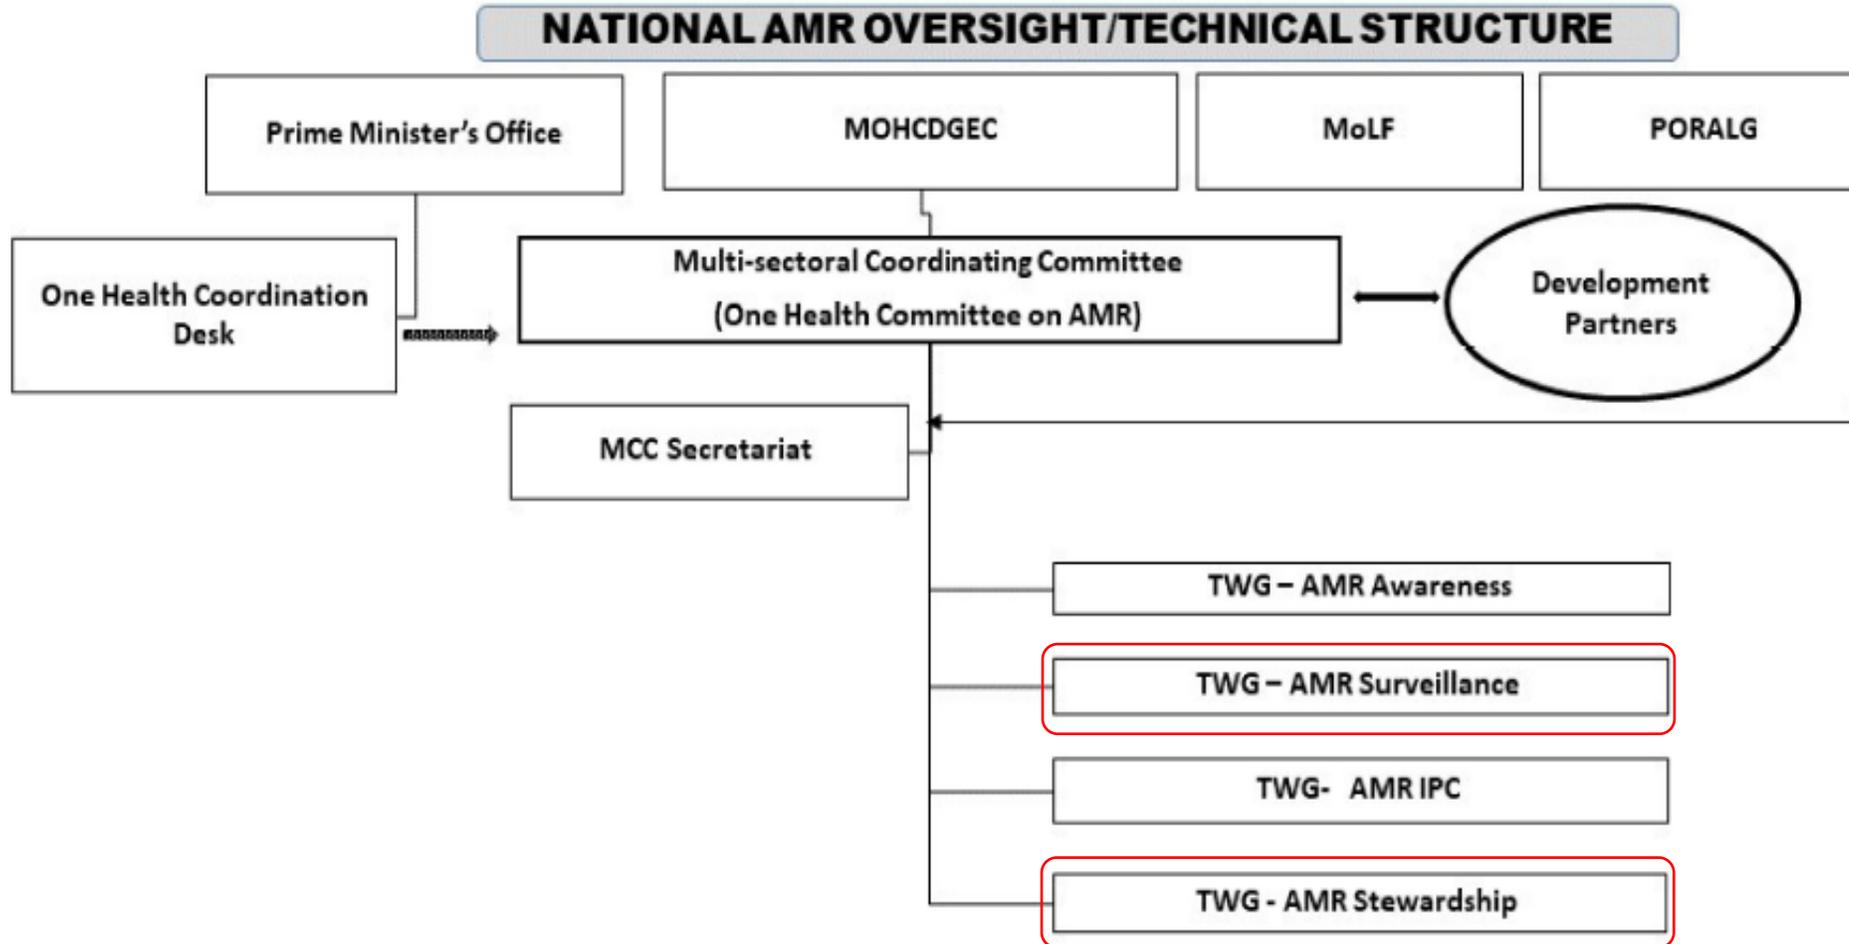

28<sup>th</sup> October 2022

- Tanzania NAP-AMR overview
- NAP-AMR milestones
- NAP-AMR implementation status
  - ✓ Antimicrobial stewardship
  - ✓ Antimicrobial surveillance
  - ✓ From AMR surveillance to optimal use of antimicrobials
- Success stories and Challenges

# Tanzania NAP – AMR Overview

*Mdegela et al., 2021 Apr 16;10(4):454. doi: 10.3390/antibiotics10040454.*

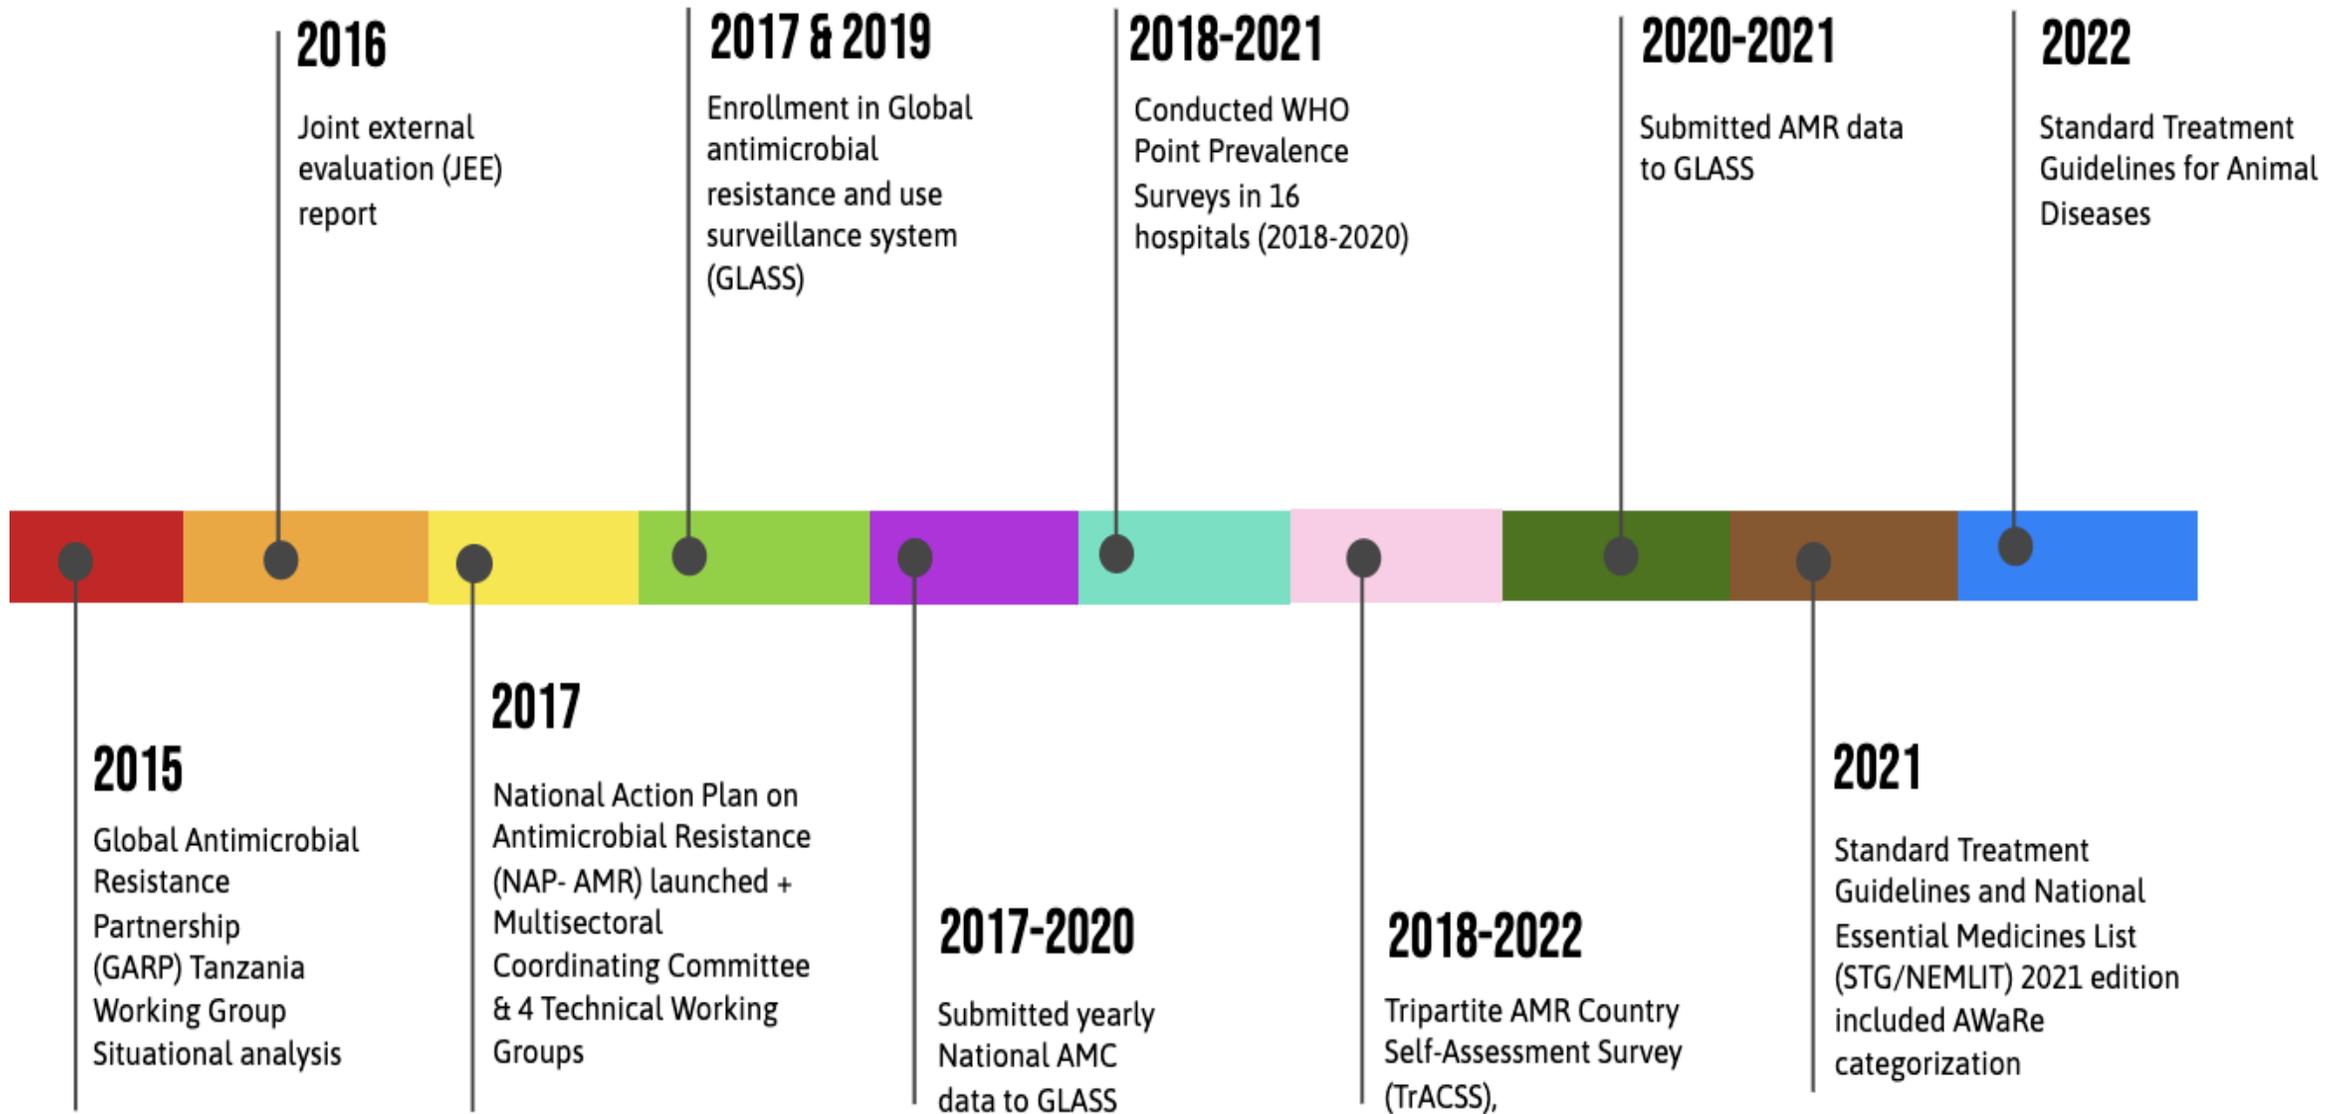

## THE NATIONAL ACTION PLAN ON ANTIMICROBIAL RESISTANCE 2017 - 2022

### STRATEGIC OBJECTIVES:

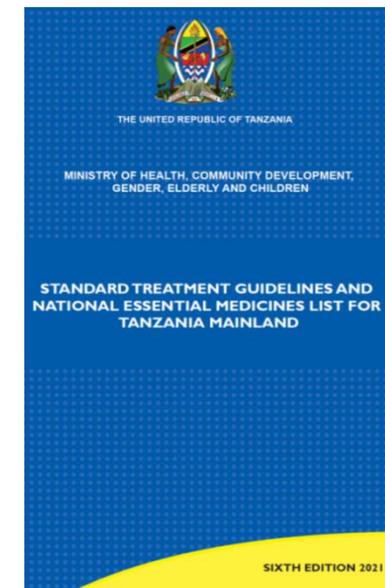

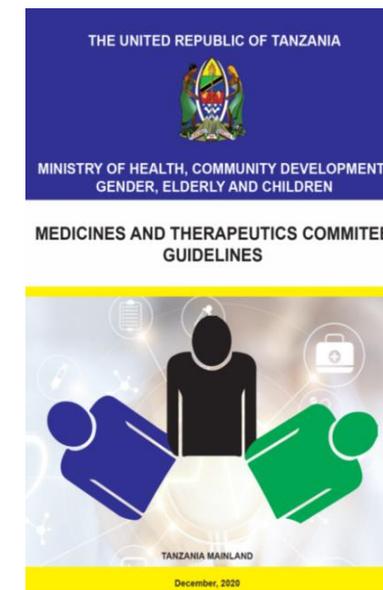

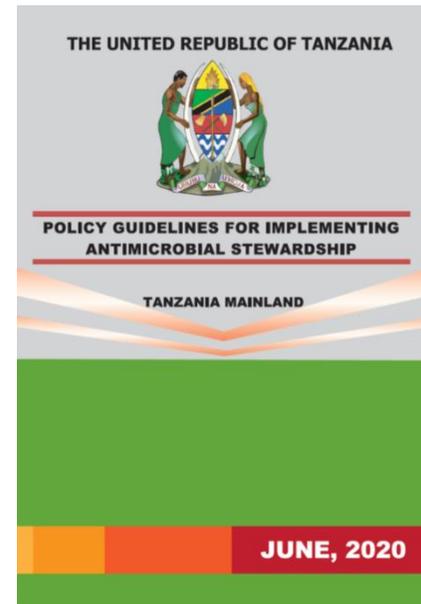

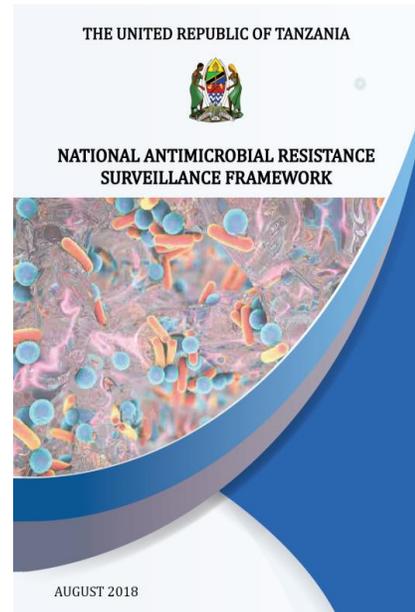

1. Create Awareness and Understanding of Antimicrobial Resistance through Effective Information, Education and Communication
2. Strengthen the Knowledge and Evidence Based through Surveillance and Research
3. Reduce the Incidence of Infection through Effective Sanitation, Hygiene and Infection Prevention Measures
4. Optimize the Use of Antimicrobial Agents in Human and Animal Health
5. Develop the Economic Case for Sustainable Investment that Takes Account of the Needs of all Countries and to Increase Investment in New Medicines, Diagnostic Tools, Vaccines and other Interventions

# Tanzania NAP – AMR Milestones

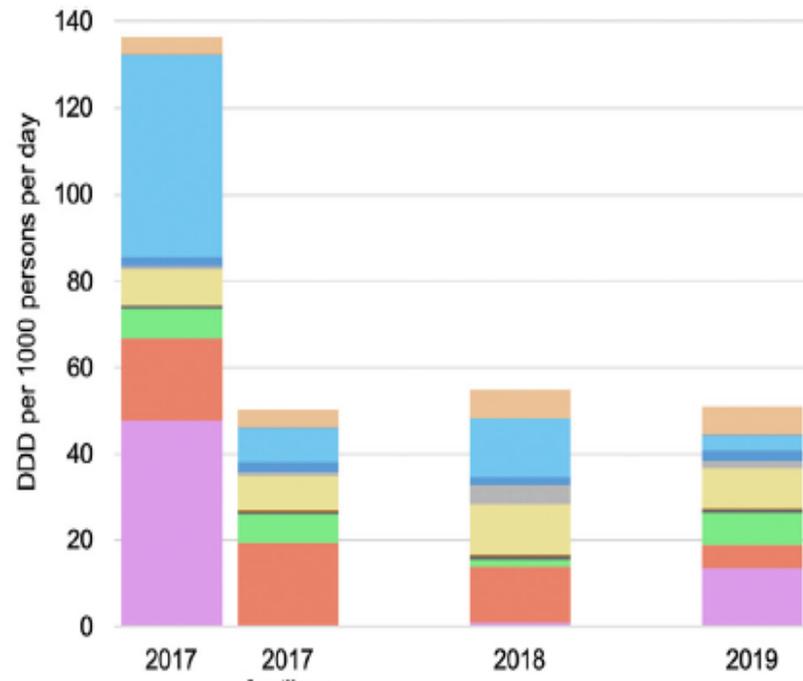

# Antimicrobial stewardship implementation status

Tanzania AWARe group classification	Number of antibiotics
Access	19
Watch	15
Reserve	8
Total	42

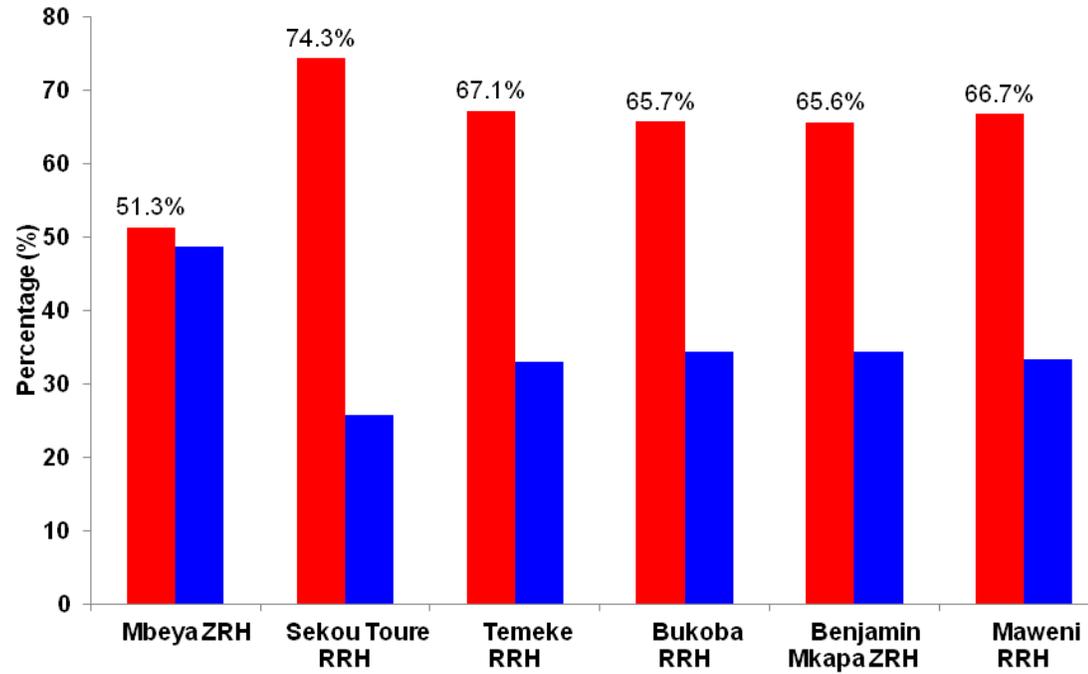

Tanzania participated in the Regional Consultation Workshop to rollout the WHO Policy Guidance on Integrated AMS activities in human health, 27 – 28 July 2021

- Antimicrobial consumption is expressed as the number of Defined Daily Doses (DDD) per 1000 inhabitants per day.
- In Tanzania, antimicrobial importation data are obtained from the TMDA and purchasing data are obtained from MSD and local manufacturers

- ✓ Overall DDD per 1,000 inhabitants per day for all antimicrobials was  $80.8 \pm 39.35$ , and decreased from 2017 to 2019.
- ✓ Access group of antibiotics dominated (penicillins, tetracycline & TMP-SXT)

# Optimization of the used of antimicrobial agents through AMS programs: WHO-PPS in Six Regional Referral Hospitals

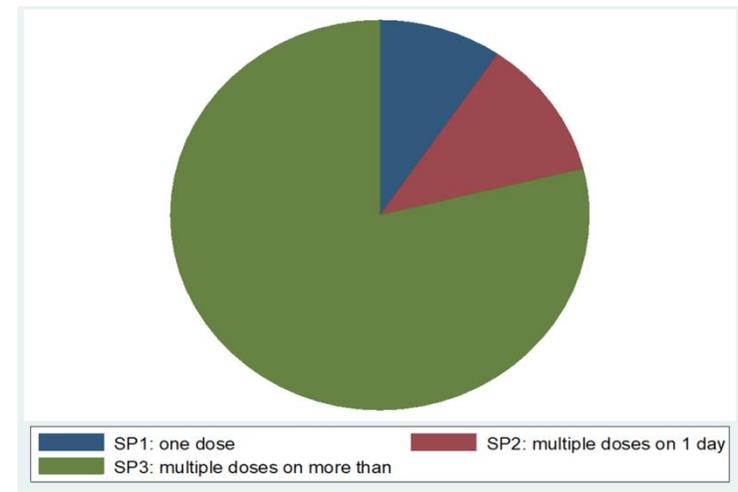

- Approx 62.3% of admitted patients were prescribed antibiotics in this PPS (esp in children and surgical patients)
- STG/NEMLIT adherence on prescribing antibiotic was 84.0%
- Antimicrobial therapies guided by laboratory results were surprisingly low !

Prescriptions by AWaRe	Hospital						Total, n (%)
	Bukoba RRH, n (%)	BMK ZRH, n (%)	Maweni RRH, n (%)	Mbeya ZRH, n (%)	Sekou Toure RRH, n (%)	Temeke RRH, n (%)	
Access	131 (99.2)	66 (97.0)	63 (96.9)	289 (97.6)	235 (97.1)	208 (99.0)	992 (97.9)
Watch	1 (0.8)	1 (1.5)	2 (3.1)	5 (1.7)	7 (2.9)	2 (1.0)	18 (1.8)
Reserve	0 (0.0)	1 (1.5)	0 (0.0)	2 (0.7)	0 (0.0)	0 (0.0)	3 (0.3)
<b>Total</b>	132 (100.0)	68 (100.0)	65 (100.0)	296 (100.0)	242 (100.0)	210 (100.0)	1,013 (100.0)

Seni et al., 2020; BMJ Open. DOI 10.1136/bmjopen-2020-042819 (accepted)

- Included patients 592 (59.0% female; 41.0% male)
- Dodoma Regional Referral Hospital (n=194), Mwananyamala Regional Referral Hospital (n=138), and Muhimbili National Hospital (n=260).
  - ✓ Patients on antibiotic were 69.6% (18% encountered one antibiotic, 59% two antibiotics, 16% three antibiotics, 7% ≥four antibiotics)
  - ✓ **Culture and sensitivity 7.3% (N=592)**

**Surgical Prophylaxis**

- From **January to December 2021**, a total of **30,295 samples** were recorded in WHONET at the National Public Health Laboratory from 9 sentinel sites (**versus 8999 samples from July to December 2020**):
  - ✓ Male: 15,566 (51.4%)
  - ✓ Children <5y: 10074 (33.3%)
  - ✓ Urine: 13,767 (45.44%) & Blood: 16,529 (54.6%)
- Of these samples, 1,022 (7.4%) urine samples and 2,119 (12.8%) blood samples were excluded because of repetitions and/or contamination
- **Therefore, the proportion of UTI and BSI were 27.4% and 16.0%, respectively**

# AMR surveillance in Tanzania

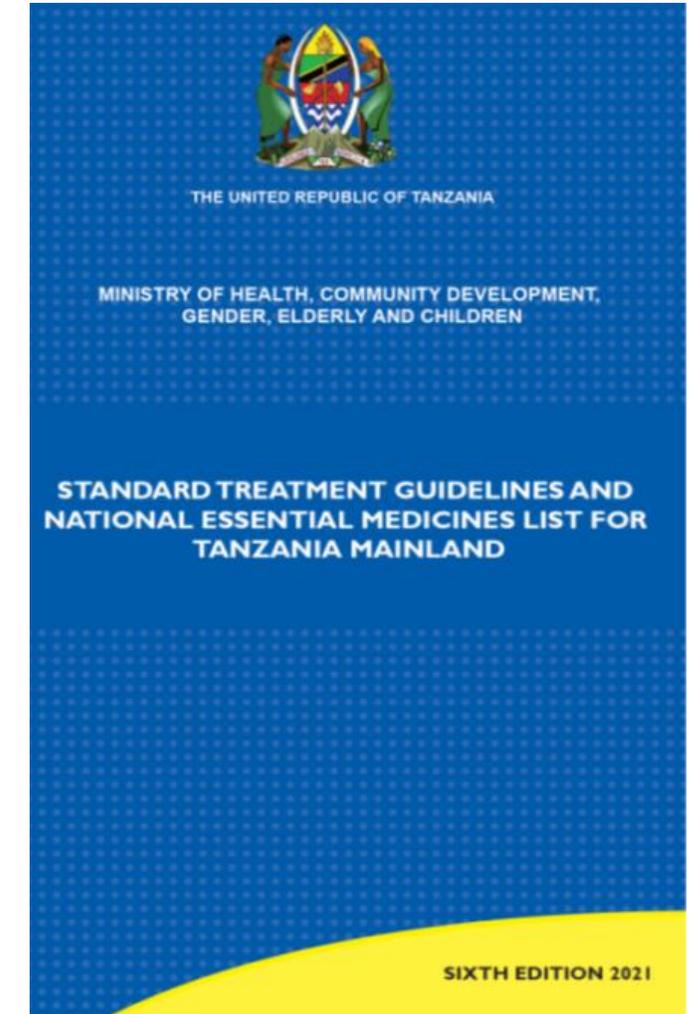

Hospital	July – December 2020				January – December 2021			
	Blood		Urine		Blood		Urine	
	N	%	N	%	N	%	N	%

Gentamicin	794	36.9	3.9	59.2
Tobramycin	14	64.3	7.1	28.6
Ciprofloxacin	949	59.6	7.5	32.9
Trimethoprim/Sulfamethoxazole	753	83.0	0.5	16.5
Nitrofurantoin	863	11.4	4.4	84.2
Chloramphenicol	58	37.9	1.7	60.3
Doxycycline	16	50.0	37.5	12.5
Tetracycline	44	59.1	11.4	29.5

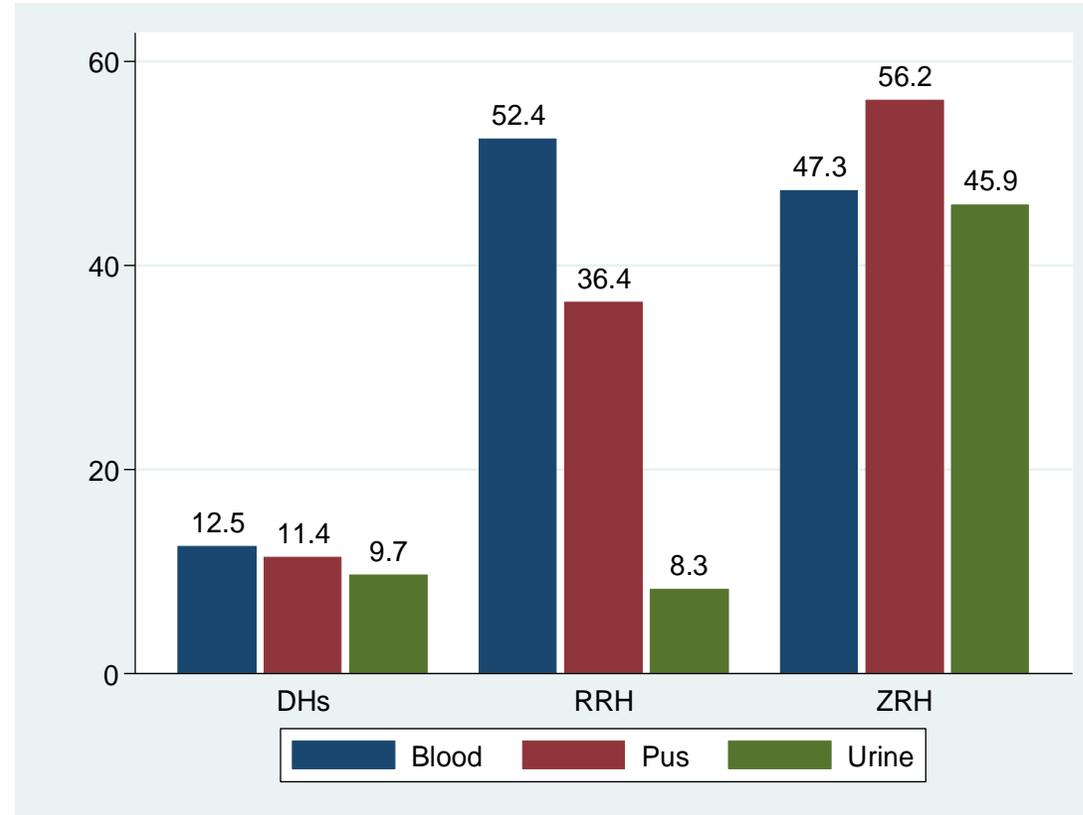

# Hospital-based AMR Surveillance in Mwanza: Preliminary findings from SNAP-AMR Project

–A total of 2316 patients admitted in 5 hospitals were enrolled between June 2019 to June 2020

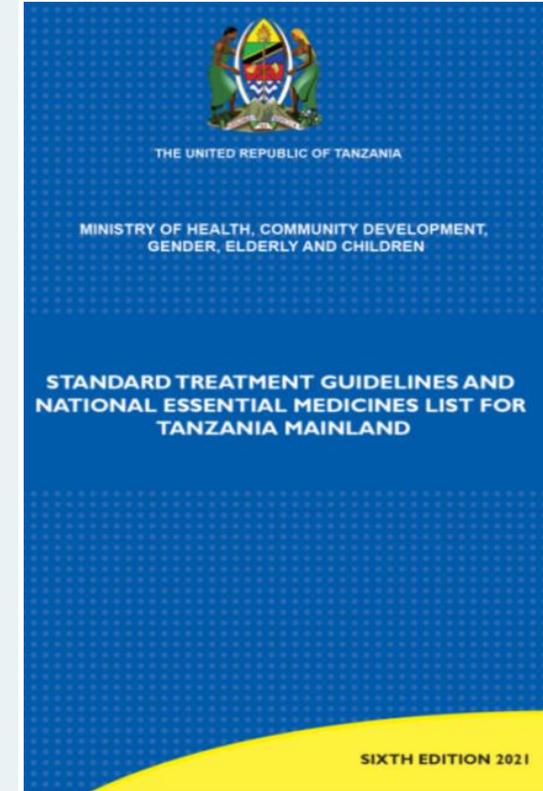

–Blood stream infections : 13.8% (148/1075); Skin and soft tissues infections: 27.8% (119/428) and Urinary tract infections: 21.8% (249/1144)

–Approximately 38% to 54% of these infections were due to *E. coli* and *Klebsiella pneumoniae* complex

–Low resistance of 3<sup>rd</sup> generation cephalosporin in lower tier like District Hospitals (DH) compared to Regional Referral Hospital (RRH ) and Zonal Referral Hospitals (ZRH)

**3<sup>rd</sup> generation cephalosporin (marked by ESBL production ) in Gram Negative Bacteria by sample types and level of health care facilities**

- AMS implementation has been successful in Tanzania and the government is fully supporting these initiatives. However, there are still:
  - ✓ Disproportional sectoral representations **(Public sector >>> Private sector)**
  - ✓ **Initiatives are largely donor-dependent**
  - ✓ **A critical need to envisage local funding mechanisms for sustainability**
- Systematically collected AMR surveillance data has generated evidence based information into the Tanzania Standard Treatment Guidelines and National Essential Medicines List (STG/NEMLIT) E.g. Treatment of UTIs using Nitrofurantoin as the first line
- A need to cascade AMR and AMU surveillance to sub-national levels E.g. more involvement of Regional Referral Hospitals and District Hospitals.
